Hachette, theory
 of electro-
 chemical
 O: decomposition,
 60, 67
 Heat,
 conducting
 power increased
 O by 44, 46;
 effect on voltaic
 ex-
 O: citement,
 270, 271,
 274, 281;
 evolved by
 animal
 electricity, 24;
 f by common
 electricity, 7; by mag-
 p. neto-electricity,
 22; by thermo-
 P< electricity, 24;
 by voltaic elec-
 K tricity, 3, 5.
 Hydriodic acid,
 electrolysis of,
 141
 Hydrogen and
 oxygen,
 action of,
 platina on,
 86, 94,
 102; and
 spongy platina,
 108
 V P:
 Ice a non-
 conductor of
 electricity
 32, 41
 Identity of
 electricities, i, 7,
 26
 Iodide of
 potassium,
 conduction by,
 41;
 electrolysis of,
 207; test of
 i chemical action,
 14
 Iodides, fused,
 electrolysis of,
 151;
 J P
 in solution,
 electrolysis of,
 141
 I, P°
 Ions, 157, 161,
 162; mutual
 rela-
 tions in circuit,
 200; table of,
 161
 P<
 Iron, Faraday on
 voltaic condition
 P of, 321, 330;
 Schdnbein on
 voltaic
 s condition of, 317
 I
 Lead, voltaic
 effects in
 sulphuret of
 I potassium, 262
 P
 Liquefaction,
 conduction
 consequent
 • upon, 32, 35, 39,
 46
 f P
 Magnetic effects of
 animal electricity,
 P:
 25; of common
 electricity, 7;
 P:
 of magneto-
 electricity, 23;
 of
 i thermo-electricity, 24;
 of voltaic
 electricity, 5, 7
 R Magneto-electricity, 22
 i Marianini on source
 of power in
 voltaic pile, 233, 234,
 261
